Leading Northwest Industrial Contractor Opens Third Northwest Fabrication Facility

PORTLAND, Ore. – One of the Northwest’s leading full service industrial general contractors and fabricators is expanding its fabrication facility space in the northwest Washington region. Greenberry Industrial, which provides mechanical, structural, and civil construction and fabrication services, announced today that it has purchased a new fabrication shop and office space in Ferndale, Wash., to better serve its growing client base in the state.

“An expanded fabrication facility in northwest Washington will give all of our customers in the region greater project options and direct access to our expanded menu of services,” said Greenberry Industrial President Jason Pond. “In addition, we expect our enhanced local presence to pave the way for new opportunities in the oil field, petrochemical, aerospace, energy, pulp and paper, port terminals and high technology industries. We plan to expand our local talent to augment our resources.”

Greenberry Industrial's new Ferndale, Wash. facility.

Greenberry recently landed a major project for a Houston-based firm for module construction destined for Alaska offshore drilling sites.

Greenberry’s new office and fabrication facility compound is its third on the West Coast, and is located at 6980 Salashan Parkway in Ferndale. The main phone number is 360-366-3767. This expanded facility is being built on the heels of the company’s other newest waterfront fabrication facility in Vancouver, Wash. Greenberry will continue to staff the office with local representatives who have experience in the Washington construction industry.

Strong Northwest Presence

Greenberry Industrial is no stranger to the Washington construction market with over 60% of its revenue from the state. Recently the company transformed the Port of Everett into a top cement distribution facility, and was recognized for its efforts by the Northwest Construction Consumer Council (NWCCC) with a Distinguished Project Award in the NWCCC’s Private Projects Over \$10 million category.

(more)

According to NWCCC Executive Director Greg Toy, the Port of Everett project hit on all cylinders when it came to the judging criteria of safety, budget, schedule and successfully meeting the challenges. In the end, the company completed the Port of Everett project in 175,000 total hours without a single lost workday due to injury.

In addition, as one of Oregon's Top 150 private companies, Greenberry Industrial has been recognized for several high profile projects in its home state this past year.

The company captured two Top Project honors given out by the *Daily Journal of Commerce* in the \$15.1 million to \$50 million private renovation category. Greenberry was singled out for its work with Ash Grove Cement Company's new processing complex in Portland, Xerox's solid color ink production site in Wilsonville, and fabrication and installation of new wood chip storage and feed system for Weyerhaeuser in Springfield.

About Greenberry Industrial

Greenberry Industrial is a full service industrial general contractor and fabricator serving clients throughout the United States. The company manages and provides all structural, civil and mechanical disciplines in industrial construction including boiler making, civil and concrete, heavy rigging, millwright and equipment setting, pipe spooling and steel erection. Greenberry has offices in Portland, Ore., Burlington, Wash., Corvallis, Ore., Ontario, Ca., and Houston, Tx.

More information on the company can be found at www.greenberry.com. or contact Chris Murray at (360) 907-5051.
